Commanders and Officers in the Royal Netherlands Army will Train in a Variety of Fighting Scenarios with the Help of Elbit Systems' New Command and Staff Trainer (CST)

The trainer is designed for training battalion and brigade headquarters in a full spectrum of operations, including military missions training and operations other than war combined with the civilian sector operations

Haifa, Israel, 29, 2010 – Elbit Systems Ltd. (NASDAQ and TASE: ESLT) ("ESLT") announced today that it was awarded a contract to supply an advanced training and simulation solution for the Royal Netherlands Army. The system will be supplied during 2011.

The unique system is designed for training battalion and brigade-sized headquarters and provides users with a trainer for the widest variety of fighting scenarios - both low and high intensity conflicts and for other non-military settings (OOTW: Operations Other Than War). It also enables training for Civilian Military Cooperation (CIMC), for example with municipal authorities, police and medical organizations such as the Red Cross.

The system combines full training with qualitative debriefing. The simulation takes place within the operational headquarters and is connected to Command, Control and Communications systems. The advanced High Level Architecture (HLA) enables compatibility of the training with the specific needs of every trainee. With the help of user friendly interface and advanced artificial intelligence, the trainer also enables minimal use of personnel and thus saves training costs as well.

Yoram Shmuely, Co-General Manager of Elbit Systems' Aerospace Division, said: "We are proud of the fact that the Royal Netherlands Army has chosen our system, further strengthening the position of Elbit Systems as a world leader in the field of advanced training solutions. CST marks a milestone in Elbit Systems wide range of high end tactical training solutions, enabling land, airborne and naval commanders to practice command and control and decision making doctrines.

We expect that this contract with the Netherlands, which is considered one of the leading countries in NATO, will lead to additional customers throughout the world".

Elbit Systems operates across the entire market of military Training and Simulation systems, in Israel and throughout the world, relying on its advanced technological capabilities, particularly in the area of software for complex project systems, and as a world leader in the upgrade of military platforms.

About Elbit Systems

Elbit Systems Ltd. is an international defense electronics company engaged in a wide range of programs throughout the world. The Company, which includes Elbit Systems and its subsidiaries, operates in the areas of aerospace, land and naval systems, command, control, communications, computers, intelligence surveillance and reconnaissance ("C4ISR"), unmanned aircraft systems ("UAS"), advanced electro-optics, electro-optic space systems, EW suites, airborne warning systems, ELINT systems, data links and military communications systems and radios. The Company also focuses on the upgrading of existing military platforms, developing new technologies for defense, homeland security and commercial aviation applications and providing a range of support services.
